NOTE:

- In case of phase fault at power supply terminals (M460:L1 and L2, M265:L1 and N), the function LED would not make indication.
- If the Un switch position is changed while the device is operating, all the LEDs flash, but the product continues to operate normally with the voltage selected at the time of energisation preceding the change of position. The LED's return to their normal state if the switch is returned to the original position selected prior to the last energisation.
